

THIN FILM PHENOMENA

KASTURI L. CHOPRA

**Staff Scientist, Ledgemont Laboratory,
Kennecott Copper Corporation
Lexington, Massachusetts**

**Adjunct Professor of Mechanical Engineering
Northeastern University
Boston, Massachusetts**

McGRAW-HILL BOOK COMPANY

San Francisco London Sydney New York Toronto Mexico St. Louis Panama

CONTENTS

Preface vii

I	INTRODUCTION	1
II	THIN FILM DEPOSITION TECHNOLOGY	10
1.	Introduction	10
2.	Thermal Evaporation	11
2.1	General Considerations	11
2.2	Evaporation Methods	14
	Resistive Heating; Flash Evaporation; Arc Evaporation; Ex- ploding-wire Technique; Laser Evaporation; RF Heating; Electron-bombardment Heating	
3.	Cathodic Sputtering.	23
3.1	Sputtering Process	23
3.2	Glow-discharge Sputtering	29
	Pressure; Deposit Distribution; Current and Voltage Depend- ence; Cathode; Contamination Problem; Deposition Control	
3.3	Sputtering Variants	34
		xi

3.4	Low-pressure Sputtering	36
	Magnetic Field; Assisted (Triode) Sputtering; RF Sputtering; Ion-beam Sputtering	
3.5	Reactive Sputtering	41
3.6	Sputtering of Multicomponent Materials	42
4.	Chemical Methods	43
4.1	Introduction	43
4.2	Electrodeposition.	44
	Electrolytic Deposition; Electroless Deposition; Anodic Oxi- dation	
4.3	Chemical Vapor Deposition (CVD).	46
	Pyrolysis (Thermal Decomposition); Hydrogen Reduction; Halide Disproportionation; Transfer Reactions; Polymeri- zation	
4.4	Miscellaneous Methods	51
5.	Vacuum-deposition Apparatus	55
5.1	Vacuum Systems	55
5.2	Substrate-deposition Technology.	61
	Substrate Materials; Substrate Cleaning; Uniform and Non- uniform Deposits; Masks and Connections; Multiple-film Deposition	
6.	Conclusions	67
7.	Appendix	69
	References.	76
III	THICKNESS MEASUREMENT AND ANALYTICAL TECHNIQUES	83
1.	Thickness Measurement	83
1.1	Electrical Methods	84
	Film Resistance; Capacitance Monitors; Ionization Monitors	
1.2	Microbalance Monitors	90
	Microbalances; Quartz-crystal Monitor	
1.3	Mechanical Method (Stylus)	96
1.4	Radiation-absorption and Radiation-emission Methods . . .	97
1.5	Optical-interference Methods	99
	Photometric Method; Spectrophotometric Method; Inter- ference Fringes; X-ray Interference Fringes	
1.6	Summary of Methods	105
2.	Analytical Techniques	108
2.1	Chemical Analysis.	108
2.2	Structural Analysis	110
2.3	Surface Structure.	110
	Optical Methods; Low-energy Electron Diffraction (LEED); Auger-electron Spectroscopy; Field-emission, Field-ion, and	

	Sputter-ion Microscopy; Reflection Electron Diffraction; Replica Electron Microscopy	
2.4	Volume Structure.	121
	X-ray Diffraction; X-ray Microscopy (Topographic Methods); Transmission Electron-diffraction and Electron-microscope Methods	
3.	Conclusions	129
	References.	130
IV	NUCLEATION, GROWTH, AND STRUCTURE OF FILMS	137
1.	Nucleation.	137
1.1	Condensation Process	138
1.2	Langmuir-Frenkel Theory of Condensation	140
1.3	Theories of Nucleation	142
	Capillarity Theory; Statistical or Atomistic Theory; Miscellaneous Models; Further Deductions of the Nucleation Theories	
1.4	Experimental Results	149
	Sticking Coefficient; Observations on Nucleation; Condensation Centers; Condensate Temperature	
2.	Growth Processes	163
2.1	General Description	163
2.2	Liquid-like Coalescence	166
	Experimental Observations; Coalescence Model	
2.3	Influence of Deposition Parameters	171
	General Aspects; Kinetic-energy Effect; Oblique Deposition; Electrostatic Effects	
3.	Some Aspects of the Physical Structure of Films	182
	Crystallite Size; Surface Roughness; Density of Thin Films	
4.	Crystallographic Structure of Films.	189
4.1	Lattice Constant of Thin Films	191
	Size Effect; Surface Pseudomorphism	
4.2	Disordered and Amorphous Structures	195
	Impurity Stabilization; Vapor Quenching (VQ): Codeposit Quenching	
4.3	Abnormal Metastable Crystalline Structures	199
	Amorphous-Crystalline Transformation; Codeposit Quenching of Metastable Alloys; Deposition-parameter-controlled and Nucleated Metastable Structures; Pseudomorphs and Superstructures; Conclusions; Metastabilization Mechanisms	
4.4	Two-dimensional Superstructures	214
4.5	Fiber Texture (Oriented Overgrowth)	220
4.6	Alloy Superlattices	223

5. Epitaxial-growth Phenomenon	224
5.1 Influence of Substrate and Deposition Conditions	225
Substrate; Substrate Temperature; Deposition Rate; Con-	
tamination; Film Thickness; Electrostatic Effects; Depo-	
sition Methods; Summary	
5.2 Theories of Epitaxy	238
Royer Hypothesis; van der Merwe Theory; Brück-Engel	
Theory; Nucleation Theories; Summary	
6. Structural Defects in Thin Films	244
7. Concluding Remarks	252
References.	254

V MECHANICAL EFFECTS IN THIN FILMS 266

1. Introduction	266
2. Internal Stresses	267
2.1 Experimental Techniques	267
Bending-plate or-beam Methods; X-ray and Electron-	
diffraction Methods; Other Techniques	
2.2 Experimental Results	271
Thermal Stress; Intrinsic Stress; Substrate Temperature	
Dependence; Thickness Dependence; Deposition Rate	
and Angle-of-incidence Dependence; Annealing Effects;	
Anisotropic Stresses; Stresses in Chemically Prepared	
Films	
2.3 Origin of Intrinsic Stress	287
Thermal Effect; Volume Changes; Surface Layer; Surface	
Tension; Electrostatic Effects; Lattice-misfit Accommo-	
dation Model; Structural-defect Hypothesis; Crystallite-	
boundary Mismatch Model; Anisotropic Growth	
3. Mechanical Properties	295
3.1 Experimental Techniques	296
High-speed Rotor; Bulge Test; Tensile Test; Electron-	
microscope Devices; Direct Measurement of Strain	
3.2 Experimental Results	298
Stress-Strain Curves; Tensile Strength; Microhardness	
3.3 Origin of the Tensile-strength Effects	306
Structural-defect Hypothesis; Surface Effects; Volume	
Effects; Phenomenological Approach	
3.4 Films vs. Whiskers.	310
3.5 Stress Relief	311
4. Adhesion of Films	313
4.1 Measurement of Adhesion	314
4.2 Experimental Results	316
4.3 Origin of Adhesion	321

5. Concluding Remarks	322
References	323
 VI ELECTRON-TRANSPORT PHENOMENA IN METAL FILMS	328
1. Introduction	328
2. Electrical Conduction in Discontinuous Films	329
2.1 Conduction Mechanisms	329
Thermionic (Schottky) Emission; Quantum-mechanical Tunneling; Activated Tunneling; Tunneling between Allowed States; Tunneling via Substrate and Traps	
2.2 Experimental Results	335
2.3 Temperature Coefficient of Resistivity (TCR)	340
2.4 Network (Porous) Films	342
2.5 Elastoresistance	344
3. Electrical Conduction in Continuous Films	344
3.1 Theories of Size Effect	345
3.2 Experimental Results	355
Thickness Dependence; Low-temperature Results; Size-effect Anisotropy; Magnetic Boundary Scattering; Superimposed Films	
3.3 Temperature Coefficient of Resistivity (TCR)	365
Theory; Experimental Results	
3.4 Specular Scattering	368
3.5 Field Effect	375
3.6 Influence of Absorption and Adsorption on Con- ductivity	378
3.7 Conductivity Changes Due to Annealing	381
3.8 High-resistivity Films	387
4. Galvanomagnetic Size Effects in Thin Films	390
4.1 Introduction	390
4.2 Longitudinal Magnetoresistance	392
4.3 Transverse Magnetoresistance (Field Perpendicular to the Film Surface— $H \perp$)	396
4.4 Transverse Magnetoresistance (Field Parallel to the Film Surface— $H \parallel$)	398
4.5 Hall Effect in Thin Films	401
4.6 The Anomalous Skin Effect	405
4.7 Eddy-current Size Effects	409
5. Transport of Hot Electrons	411
6. Thermal Transport	417
6.1 Thermal Conductivity	417
6.2 Thermoelectric Power	419
6.3 Heat Transport across Film - Insulator Interface	423

7. Concluding Remarks	425
References	425
VII TRANSPORT PHENOMENA IN SEMICONDUCTING FILMS	434
1. Introduction	434
2. Theoretical Considerations	435
Mobility; Galvanomagnetic Surface Effects; Anisotropy Effects; Quantum Size Effects	
3. Experimental Results	440
3.1 Size Effects	440
3.2 Transport Properties of Thick Films	444
4. Photoconduction in Semiconductor Films	452
4.1 Activation Process	452
4.2 Photoconductivity Mechanisms	454
4.3 High-voltage Photovoltaic Effect	455
5. Field Effect — Thin-film Transistor (TFT)	456
6. Concluding Remarks	459
References	460
VIII TRANSPORT PHENOMENA IN INSULATOR FILMS	465
1. Introduction	465
2. Dielectric Properties	466
2.1 Thin Films	466
2.2 Thick Films	470
2.3 Dielectric Losses	471
3. Piezoelectric Films	477
4. Electrical Conduction in Insulator Films	479
4.1 Conduction Mechanisms	479
4.2 Thermionic (Schottky) Emission	481
4.3 Quantum-mechanical Tunneling	483
Theories; Image-force Correction; Temperature-field (TF) Emission; Temperature Dependence; Experimental Re- sults; Conclusions	
4.4 Bulk-limited Conduction	499
Space-charge-limited Current (SCLC) Flow; Trap and Im- purity Effects	
4.5 Voltage-controlled Negative Resistance (VCNR)	503
4.6 Current-controlled Negative Resistance (CCNR)	506
4.7 Tunnel Emission (Hot-electron Transport)	508
4.8 Tunnel Spectroscopy	514
5. Photoeffects in Tunnel Structures	516
5.1 Electroluminescence	516

5.2 Photoconduction and Photoemission	518
6. Concluding Remarks	522
References	522
IX SUPERCONDUCTIVITY IN THIN FILMS	529
1. Introduction	529
2. Basic Concepts	530
3. Transition Temperature of Thin-film Superconductors	535
3.1 Introduction	535
3.2 Thickness Dependence	537
3.3 Superconductivity-enhancement Phenomenon	539
3.4 Mechanisms of Enhanced Superconductivity	544
3.5 Influence of Stress	547
3.6 Influence of Impurities	548
3.7 Electrostatic-charge (Field) Effect	549
3.8 Proximity Effects in Superimposed Films	550
4. Critical Magnetic Field	555
4.1 Type I Films	556
4.2 Type II Films	560
4.3 Mean-free-path Dependence of H_{cF}	562
4.4 Transverse Critical Field	563
5. Critical Current	566
6. Propagation of Normal and Superconducting Phases	572
7. Superconductive Tunneling	573
7.1 Experimental Results	576
General; Tunneling in Superimposed Films; Gapless Superconductivity	
7.2 Supercurrent (Josephson) Tunneling	582
8. Infrared Transmission through Thin Films	586
9. Superconductive Thin-film Devices	588
9.1 Cryotrons	588
Wirewound Cryotron; Crossed-film Cryotron (CFC); The Shielded CFC; In-line Cryotron; Multicrossover Cryotron (MCC); Ferromagnetic Cryotron Configuration	
9.2 Computer Memory Devices	593
Crowe Cell; Persistor, Persistatron, and Continuous-film Memory (CFM)	
9.3 Superconducting Magnets	595
9.4 Low-frequency Devices	596
9.5 Bolometers — Radiation Detectors	598
9.6 Tunnel Devices	598
10. Concluding Remarks	599
References	600

X	FERROMAGNETISM IN FILMS (by M. H. Cohen).	608
1.	Introduction	608
2.	Magnetization vs. Thickness	610
3.	Stoner-Wohlfarth Model (A First Approximation)	614
4.	Magnetic Anisotropy	619
4.1	Shape Anisotropy	619
4.2	Magnetocrystalline Anisotropy	620
4.3	Strain-Magnetostriction Anisotropy	621
4.4	M-induced Uniaxial Anisotropy	622
4.5	Oblique-incidence Uniaxial Anisotropy	629
4.6	Unidirectional Anisotropy	633
4.7	Perpendicular Anisotropy	633
5.	Magnetization Ripple	635
5.1	Anisotropy-dispersion Model	638
5.2	Micromagnetic Model	639
	Hoffmann's Theory; Harte's Theory	
6.	Quasi-static Manifestations of Ripple	649
6.1	Rotational Hysteresis	649
6.2	HA Domain Splitting (HA Fallback).	652
6.3	Initial Susceptibility	654
6.4	Effects of High KD/K_u	658
7.	Domain Walls	659
7.1	Structure of Walls	659
	Bloch Walls; Néel Walls; Crosstie Walls; Other Wall Calculations; Experimental Results	
7.2	Wall Motion	666
	Domain Nucleation and Growth; Coercive Force; Wall Velocity; Magnetic Viscosity; Creep; Wall Streaming	
8.	Resonance	677
8.1	Ferromagnetic Resonance	677
8.2	Spin-wave Resonance	681
8.3	Energy-loss Mechanisms	685
9.	Switching	685
9.1	Coherent Rotation Theory	685
9.2	Experimental Results	687
9.3	Interpretation	691
10.	Complex Magnetization Configurations	692
10.1	M Normal to Film Plane.	693
	MnBi Films ($K_{\perp} < 0$); Stripe Domains ($K_{\perp} > 0$)	
10.2	Multilayer Films	696
	Interaction Mechanisms; Domain Wall Interactions	
10.3	Cylindrical Films	698

11. Measurement Techniques	699
11.1 Microscopic Observations	699
Bitter Technique; Kerr and Faraday Magneto-optical Effects; Lorentz Electron Microscopy	
11.2 Macroscopic Measurements.	702
Mechanical Detection (Torque Magnetometer); Flux-pickup Detection; Magneto-optic Detection; Magneto-resistive or Hall-effect Detection; Ripple-independent H_K Determinations	
12. Applications.	706
12.1 Flat-film Memory	707
12.2 Cylindrical-film Memory	709
12.3 Future Developments	710
References	710
XI OPTICAL PROPERTIES OF THIN FILMS	721
1. Introduction.	721
2. Thin Film Optics	722
2.1 Reflection and Transmission at an Interface	723
2.2 Reflection and Transmission by a Single Film	724
2.3 Anisotropic and Inhomogeneous Films	728
2.4 Multilayer Films	728
2.5 Optical Absorption	729
3. Optical Constants of Thin Films	732
3.1 Experimental Methods	732
Reflection Methods; Reflectance and Transmittance Methods; Interferometric Methods; Spectrophotometric Methods; Critical-angle Method; Polarimetric Methods (Ellipsometry); Summary	
3.2 Results on Optical Constants	741
General Remarks; Metal Films; Abnormal Absorption Phenomenon; Maxwell-Garnett Theory of Abnormal Absorption; Dielectric and Semiconducting Films	
3.3 Size Effects in Optical Properties	757
Semiconductor and Dielectric Films; Metal Films	
4. Thin Film Absorption and Photoemission Phenomena	761
4.1 Infrared Absorption	761
Optical Modes; Surface Modes	
4.2 Magneto-optical Absorption	763
4.3 Plasma-resonance Absorption	764
4.4 Ultraviolet Absorption	767
4.5 Photoemission from Metal Films	767

5. Multilayer Optical Systems	769
5.1 Antireflection Coatings	770
Inhomogeneous Films; Homogeneous Single Films; Multi-layer Films; Infrared Antireflection Coatings	
5.2 Reflection Coatings	777
Metal Mirrors; All-dielectric System	
5.3 Interference Filters	781
Reflection Filters; Transmission Interference Filters; Frustrated Total-reflection Filter	
5.4 Absorptance and Thermal Emittance of Coatings . . .	785
5.5 Thin-film Polarizers	786
6. Concluding Remarks	786
References	787
